Summary

Systems / infrastructure engineer who's used to being the technical point person. I run HA Windows Server infrastructure, tighten security without killing usability, and work directly with researchers/faculty to ship solutions people actually use. Strong at discovery, explaining tradeoffs, building simple docs, and getting unstuck fast.

Core Skills

- **Customer/Stakeholders:** discovery, requirements, translating needs into workable solutions, training/walkthroughs
- **Systems:** Windows Server 2019, HA/Failover clusters, virtualization concepts, back-ups/restore basics
- **Security:** hardening baselines, patching workflows, access controls/least privilege, incident response fundamentals
- **Identity/Access:** provisioning, permissions, onboarding/offboarding, account cleanup and access reviews
- **Networking:** IP/DNS/DHCP, Wi-Fi/VPN fundamentals, firewall concepts, troubleshooting
- **Automation/Docs:** PowerShell, Bash, Python, runbooks, inventory/asset tracking, process cleanup

Education

Brigham Young University, Provo, UT

Dec. 2025

B.S. in Computer Engineering, Applying Masters IS Management 2026

Coursework: Computer Networking, Security, Computer Design.

Experience

Physics and Astronomy IT, Brigham Young University

Sep. 2022–Jan. 2026

Systems Engineer / Jr. Systems Administrator

- Ran a **7-node HA Windows Server 2019 cluster** supporting critical services; handled patching, monitoring, failures, and recovery.
- Improved security posture for **500+ users**, cutting threat vectors by **35%** through hardening, access controls, and tighter operational controls.
- Replaced aging servers and database workloads in a datacenter environment; planned migrations/cutovers to reduce downtime and failure risk.
- Supported research + ML workflows by provisioning environments and access patterns that balanced usability, reproducibility, and security.
- Worked directly with physics faculty to scope needs, unblock research, and keep systems stable under real-world usage.

Projects

- **Home Networking / Lab IT:** Built NAS + VPN, AP/switch/router stack, DNS filtering, and basic automation for remote admin.
- **Innovation Design Competition:** 1st place out of 150 submissions.
- **Provisional Patent (Boat Safety Device):** Filed provisional patent for a safety device concept and prototype work.
